

EYEGAZE Mounting options

FS-TeleFloat

A telescopic rolling floorstand for positioning devices over beds or wheelchairs, with a free-floating articulating arm and height adjustment. Available as QuickPack for traveling. The Quick-Pack has legs that fold up and come in a large rolling case for easy transport.

FS-VarioFloat

A telescopic rolling floorstand for positioning devices over beds, wheelchairs or recliners with free floating articulating arm, height and width adjustable. Available as Quickpack for traveling. This mount is typically used when people need a wide base (e.g., when sitting in a recliner).

FS-PentaFloat Eco

A Rolling floor mount on five-star weighted base to position communication aids over beds. Column with fixed height and free floating articulating arm. Penta mounts are usually ordered when the individual needs a mount with a small footprint base.

FS-Pentalock-Tele

A telescopic floor mount on a five-star base to position communication aids over beds, sofas or wheelchairs. Column has height adjustment for shorter individuals needing lower access. Classic floorstand arm with double-clamp UDS & QuickShift joints on a small footprint base.

Monty 3D EyeControl HD

When ordering a wheelchair mount the make/model has to be entered into Target Pipeline to ensure the proper base clamp is ordered.

Heavy duty wheelchair mount with double-Tube foundation (the double tube works as a supporting strut for more rigidity, and anti-sagging, backlash-free swivel function. This mount is ideal for communication devices that use eye tracking.

Base Coupler

Easily remove the entire wheelchair mount at the frame clamp. **The base coupler is an extra accessory not covered by insurance.*

Adjustable Articulating Arm with Table Clamp & Tilter (table not included)

Now choose how the device will be mounted on the chosen mounts. Choose one option shown below.

1. Tilter with LC Adapter

The tilter comes standard with the articulating adjustable table mount. If the individual also orders a wheelchair mount, they can place the tilter in the “peanut” that attaches to their wheelchair mount pole. This option is beneficial when caregivers want to quickly and easily move the Eyegaze Edge between both mounts with minimal effort and adjustment. When used on a wheelchair mount with peanut, it can be clamped down to lock in place with an allen wrench.

2. LC Mounting Plate

Readapt LC mounting plate (pictured) attaches to the back of the Eyegaze Edge. (The Quick release piece comes standard with the wheelchair mount and floorstands). It can be more difficult for caregivers to adjust quickly, but allows them to lock the device in place quickly to secure the right position without need of an allen wrench. This may be beneficial for wheelchair users who want to travel easily with their Eyegaze system attached to the chair.

QuickPack for floor stands
